

a second stent-graft having a bare stent proximal section, the second stent graft being positioned such that the bare stent proximal section allows blood flow with cross-artries.

18. (Cancel) A system for bypassing an aneurysm comprising:
a first stent-graft having a first bare stent proximal section and a first sealing gasket adjacent the first bare stent proximal section; and
a second stent-graft having a second bare stent proximal section and a second sealing gasket adjacent the second bare stent proximal section.

ABSTRACT OF THE INVENTION

[The present invention is directed to a] A system, apparatus, and method for treating and/or repairing an aneurysm, preferably an aortic aneurysm, and most preferably, an abdominal aortic aneurysm is disclosed. The systems, devices, and methods disclosed herein [of the present invention] include a first prosthesis or first prosthesis, and at least one second prosthesis for bypassing the aneurysm, and at least one third prosthesis for establishing a fluid flow channel from the abdominal aorta into another artery, such as a renal artery.
